

Forge proof prescription number

Pharmacies: Effective 9/14/05 the NCPDP 5.1 data element (454-EK Scheduled Prescription ID Number) will be enabled for submission. This data element is to be used to report the Official New York State Prescription blank/form Serial Number on claims. In 2006 this data element number will be required for claims processing as part of the NYS Forge Proof Prescription Program.

Currently, this change will not effect or impede your claims processing and has been implemented to provide you the opportunity to update your software, to begin submitting this data element in a phased in approach as you change and test your systems.

For more information on this update refer to the NCPDP Request Companion Guide on www.nyhipaadesk.com under the eMedNY Transactions topic and the Pro/Dur ECCA Provider and Standards Manuals on the www.eMedNY.org websites.
