## GENERAL INFORMATION AND RULES

1. The fees in the Laboratory Fee Schedule apply to clinical laboratory tests selected from Physician's Current Procedural Terminology (CPT), Professional Edition, 2016 or the Healthcare Common Procedure Coding System (HCPCS), Professional Edition, 2016. Reimbursement is limited to indicated uses of procedures that are FDA approved for in vitro diagnostic use or, are recognized as generally acceptable by the New York State Department of Health. NYS Medicaid Updates for the most current coverage policies can be accessed at the following link:

[http://www.health.ny.gov/health\\_care/medicaid/program/update/main.htm](http://www.health.ny.gov/health_care/medicaid/program/update/main.htm)

2. The fees include the services of all licensed professionals required by certification in the performance of the test.

3. The fees include all costs related to specimen testing, including collection, storage and transport of specimens, in addition to performance and reporting of results. Unreported instrument controls are not separately reimbursable. **"By Report"** (BR), as indicated in the Fee Schedule, reimbursement requires a statement indicating the need for the service, the type of test performed, test results, the number and source of the specimen(s) and documentation of the laboratory's usual and customary charge to the general public for the service.

4. The fees are for **quantitative** analyses, unless otherwise specified. Mathematical calculations (e.g., calculation of A/G ratio, ionized calcium, free thyroxine index (T<sub>4</sub>) or osmolality) are not reimbursable.

5A. Therapeutic drug monitoring is reimbursable when quantitative determination of blood concentration is clinically relevant as a part of a regimen designed to attain and sustain therapeutic effect by maintenance of blood level within a defined range. The intensity and probability of therapeutic or toxic effect must quantitatively correlate with blood concentration. In addition, one or more of the following criteria must be satisfied:

(1) there is a narrow range between those concentrations giving the desired response and those producing toxicity, (2) readily assessed alternative endpoints (e.g., prothrombin time for oral anticoagulants) are lacking or (3) there is large inter individual variability in the absorption and disposition of the drug. Therapeutic monitoring is a covered service only when performed on specimens of blood. Use the drug specific codes 80150 through 80203. Code 80299 is to be used only for drugs, which meet the criteria for therapeutic monitoring, outlined above and are not listed by individual code. Codes 80299 is billable "By Report" and the drug(s) must be specified in the procedure description field on the Claim Form. Peak and trough (or predose and postdose) analyses, when clinically indicated (e.g., aminoglycosides), are reimbursable as two procedures.

5B. The fee for code 80300, 80301, 80303 or 80304 covers screening of one specimen for all drugs including but not limited to alcohol, amphetamines, barbiturates, benzodiazepines, cocaine and metabolites, methadone, methaqualones, opiates, phencyclidines, phenothiazine, propoxyphenes, quinine, tetrahydrocannabinoids (marijuana) and tricyclic antidepressants.

Screening by a broad-spectrum chromatographic procedure, which detects multiple drug classes, should be billed using code 80303 or 80304. Each step in the sequential development of a

chromatograph is NOT considered a separate procedure. When an analytical condition, e.g., column temperature or flow rate, is changed such that additional controls must be run, subsequent analysis of the same specimen for additional drug(s) is considered a separate procedure for billing purposes.

Screening for any number of drug classes by devices capable of being read by direct optical observations ( e.g. dipsticks, cups, cards or cartridges, with or without instrument assistance) should be billed using 80300. Report 80300 once, irrespective of the number of direct observation drug class procedures or results on any date of service.

Screening for drugs using immunoassay or enzyme assay using multichannel chemistry analyzers should be billed using code 80301. Use 80301 once to report single or multiple procedures performed, irrespective of the number of procedures, classes, or results on any date of service.

Use code 80301 for the follow drugs/drug classes:

- Alcohol
- Amphetamines
- Barbiturates
- Benzodiazepines
- Buprenorphine
- Cocaine metabolites
- Heroin metabolites
- Methadone
- Methadone metabolites
- Methamphetamine
- Methaqualone
- Methylenedioxymethamphetamine
- Opiates
- Oxycodone
- Phencylicine
- Propoxyphene
- Tetrahydrocannabinol (THC) metabolites (marijuana)
- Tricyclic Antidepressants.

Codes 80320 through 80377 are only billable when a presumptive positive drug screen is found using codes 80300, 80301, 80303 or 80304. For confirmation testing, bill the appropriate code related to the drug/drug class. Use of these codes for drug testing without a presumptive positive screen is not reimbursable. For therapeutic monitoring of drugs included in these codes, use 80299.

6A. Certain laboratory procedures are often performed, either manually or on automated equipment, in combination with each other. For purposes of reimbursement, when a code defines a specific combination of procedures performed on a date of service, it is appropriate to utilize that unique code.

6B. When procedures for Vitamin B12 (82607) and Folate (82746 or 82747) are performed in combination, the maximum reimbursable fee for code 82746 or 82747 is \$6.25. When a procedure for Ferritin (82728) is performed in combination with Vitamin B12 or Folate, or any of the Organ or Disease Oriented Panels (80048-80076), or any of the individual chemistry analyte codes listed in the fee schedule (see Rule 6A), the maximum reimbursable fee for 82728 is \$5.70.

## Laboratory Procedure Codes

---

6C. When two or more Hepatitis B tests are performed in combination, reimbursement will be reduced by 50% for each test after the first. See also Rule 16. When Hepatitis A, C or D tests (codes 86692, 86708, 86709, 86803 or 87380) are performed in combination with each other or with any Hepatitis B test, the maximum reimbursable fee per Hepatitis A, C or D test is \$5.00. When multiple procedures for antigen or antibody to two or more infectious agents (codes 86602-86689 and 86698-86703 or 86710-86793) are performed in combination, reimbursement is limited to the greater fee plus 50% of the lesser fee(s). The fee for code 86701 Antibody HIV-1 includes reimbursement for up to three screen assays of a single specimen. Use code 87390 for P24 HIV antigen.

7A. For purposes of reimbursement based on the Laboratory Fee Schedule, a complete blood count (CBC) includes a hematocrit, hemoglobin determination, RBC count, RBC indices, WBC count and a platelet count. See code 85027. For a CBC with an automated differential WBC count, use code 85025. **Code 85060 requires interpretation by physician and written report.**

7B. Codes for CBC individual components (85013, 85014, 85018, 85048 and 85049) may not be billed in conjunction with procedure codes including a CBC (85025 and 85027). The code for automated differential WBC count (85004) may not be billed in conjunction with codes 85025 and 85027.

8. For purposes of reimbursement, codes 86850 and 86905 represent examples of procedures considered to be integral parts of outpatient transfusion and hemodialysis services. No separate reimbursement will be allowed.

9. For **pregnancy detection** and where the reported test result is qualitative or semi-quantitative, use code 81025 or 84703. Code 84702 is reimbursable for a quantitative HCG value reported for a diagnostic use (e.g., monitoring post-surgical growth of germ cell neoplasm where quantitative HCG is relative to growth). Code 84702 is not reimbursable for a routine screen for pregnancy.

10. Appropriate billing of antibody and antigen procedures is as follows:

- For antibody or antigen as specific markers of infectious disease, use the most specific code corresponding to the organism name (e.g., 86618 Antibody; *Borrelia burgdorferi*) or the disease name (e.g., 87340 Hepatitis B surface antigen).
- For an infectious agent antibody or antigen not listed by name, use the **"By Report"** code for the type of organism (e.g., 86609 Antibody; bacterium not elsewhere specified or the analytical method, e.g. 87299 Infectious agent antigen detection by immunofluorescent technique; not otherwise specified, each organism). Document the name of the organism, and, if applicable, the immunoglobulin subclass(es), on the Claim Form (See Rule 3).
- For antibody other than to infectious agent(s) (e.g., autoantibodies) use the most specific code corresponding to the analyte (e.g., 86376 Microsomal antibody (e.g. thyroid or liver-kidney, each)).
- For non-infectious agent antibody or antigen NOT listed by analyte, use the **most** specific code for the method used (e.g., 86255 Fluorescent **noninfectious** agent antibody; screen each antibody); when billing **"By Report"**, the name of the analyte must be documented on the Claim Form (See Rule 3).

- Multiple tests to detect (1) antibodies to organisms/analytes classified more precisely than the specificity allowed by available codes, (2) antibodies in paired specimens (acute vs. convalescent), or (3) antibodies of different immunoglobulin subclasses, are reimbursable as separate procedures; multiple units of a code (e.g., two units of 86658 for Coxsackie A and B species of enterovirus) may be claimed when analyses yield separately reported results for each subclassification, specimen or Ig subclass.

11. Organ or Disease Orientated Panel codes. Effective July 1, 2000, the panel codes 80047, 80048, 80051, 80053, 80061, 80069 and 80076 should be used to bill designated combinations of tests regardless of whether the tests are ordered and/or performed individually, as a panel, or as multiple panels at different times. If 2 or more panel codes with overlapping component tests, (i.e., 80047, 80048, 80051, 80053, 80076) are billed, the lab is not entitled to reimbursement for the duplicate tests. If one or more of the codes for chemistry tests where this rule applies are billed in combination with another and/or a panel code, total payment due for those chemistry tests is limited as follows: up to 2=\$5.03, 3-6=\$6.04, 7-9=\$7.25, 10-12=\$9.09, 13-16=\$10.00, 17-18=\$11.00, 19 or more=\$12.00.

12. Cytogenetic studies codes 88245, 88267 and 88269 must be billed in combination with code 88280 to report a 2-karyotype chromosome analysis as described in the quality control standards for cytogenetic licensure.

13. Reimbursement for immune electrophoresis includes payment for the electrophoretic separation and quantitation. Therefore, no separate reimbursement for code 84165 will be allowed when code(s) 86320-86325 are billed.

#### 14.A. Genetic Testing General Guidance

The molecular pathology codes (81400 through 81408, 81479 and 84999) are reimbursable for DNA based genetic testing not specifically listed in the fee schedule. All molecular pathology codes (81200 through 81408 and 81479) may be performed as (1) a family study of up to six individuals to determine the genetic carrier/disease status of an individual patient or a fetus as part of a comprehensive program of genetic counseling and where indicated by familial medical history or adjunctive prenatal testing OR (2) an individual study by diagnostic deletion analysis of a patient affected by a genetic disorder. DNA based testing defined under State licensure as investigational for a certain disease is not reimbursable. Codes 81400 through 81408, 81479 and 84999 are not reimbursable for non-genetic applications such as microbial detection or quantification, or testing for acquired changes in genetic material (e.g., T or B cell markers, immunoglobulin heavy or light chain rearrangements associated with malignancy). Reimbursement for these codes should be submitted according to the "By Report" instructions in Rule 3.

### C. Pharmacogenetic Testing

**CYP2D6** - Testing for CYP2D6 (cytochrome P450, family 2, subfamily D, polypeptide 6) gene analysis, common variants should be billed using CPT code 81226. NYS Medicaid considers genotyping, once in a lifetime, for CYP2D6 polymorphisms medically necessary to determine drug therapy for the following:

- Patients diagnosed with Huntington's disease requiring doses of Xenazine® (tetrabenzine) greater than 50 mg per day.

**EGFR** - Testing for neuroblastoma RAS viral [v-ras] oncogene homolog gene analysis should be billed using CPT code 81311. NYS Medicaid considers EGFR testing medically necessary, once in a lifetime, when used to determine effective drug therapy for medications such as cebtuximab (Erbix) that treat certain cancers (e.g., lung, colorectal, head and neck) thought to be associated with this genetic mutation.

15. Code 82105, 82106, 82378, 83950, 83951, 84066, 84153, 84154, 84702 or 86316 is reimbursable for an **oncofetal antigen** (tumor marker) procedure used as an adjunctive test with other accepted tests in monitoring for tumor growth recurrence in a patient who has had a tumor irradiated or surgically removed. Codes 82105 and 82106 are also reimbursable for alpha-fetoprotein testing used for prenatal (nondiagnostic) gestational age dependent screening for neural tube defects. Code 86316 for immunoassay for a tumor antigen not elsewhere specified, e.g., CA 50, is billable **"By Report"**. When a procedure for (CEA) carcinoembryonic antigen (82378) is performed in combination with Comprehensive Metabolic Panel (code 80053) the maximum reimbursable fee for code 82378 is \$8.00. A test for an oncofetal antigen (tumor marker) is reimbursable for diagnostic purposes only when used in accordance with the FDA approval criteria for its use. When 84153 and 84152 or 84154 are billed in combination, the maximum fee for 84152 or 84154 is \$21.35.

16. Claims for reimbursement for procedures generally considered to be follow-up testing must be supported by reporting a specific (presumptive) diagnosis which considers the results of the initial test(s) as well as the patient's history, symptoms, etc. The ordering practitioner must supply such diagnosis, or reason for the patient encounter, to the laboratory. For example:

- Code 82172 is reimbursable when performed for diagnostic purposes for a patient with documented elevated total cholesterol (>240 mg/dl) and an abnormally low HDL cholesterol level (< 35 mg/dl) and/or documented family history of coronary artery disease (CAD). A test for apolipoprotein(s) is **not** reimbursable when used as a **screening** procedure for CAD risk assessment.
- Thyroid function tests other than "screen" tests for clinically suspected thyroid dysfunctions are reimbursable only when indicated for differential diagnosis, to resolve disagreement with documented clinical impressions, to resolve equivocal results or to monitor therapeutic regimens of diagnosed thyroid-dysfunctional patients. For purposes of this rule, a "screen" test is either total thyroxine (84436) or free thyroxine index (84436 + 84479) or sensitive-TSH (84443).
- Serologic markers that are clinically indicated for staging, management or prognosis of viral hepatitis B are reimbursable only when it is determined by initial diagnostic testing that the patient has type B hepatitis.

17. The fee for presumptive identification of microbial culture isolates includes reimbursement for all procedures used to presumptively identify the organism, including stains. When definitive identification is medically necessary and additional methods are used for definitive identification, (e.g., molecular methods) use code 87076 or 87077, as applicable, in addition to the appropriate code for isolation (87040 - 87075).

18. Lymphocyte evaluation by immunophenotyping is reimbursable for analysis of lymphocyte subpopulations for monitoring of disease activity and therapeutic response in, for example, immunodeficiency or autoimmune disease, or cancer. Only those antibodies or "markers" FDA approved or cleared and/or approved by the Department are reimbursable as follows:

- Bill 1 unit of code 86360 when the lab performs an "abbreviated lymphocyte" analysis panel\* by 2 color flow cytometric analysis or any acceptable tube combination out of the possible four analysis tubes by 3 or 4-color flow cytometric analysis, and reports absolute CD4 counts with CD8 counts;
- Bill 2 units of code 86360 when the lab performs a "full lymphocyte" analysis panel\* by 2, 3 or 4 color flow cytometric analysis and reports absolute CD4 counts with CD8 counts. Codes 86355, 86357, 86359, 88184, 88185 and 88187 through 88189 are not reimbursable for a 'full lymphocyte' analysis panel when only performing absolute CD4 counts with CD8 counts;
- Bill 1 unit of code 86361 when the lab performs lymphocyte subpopulation counts by a method other than flow cytometry or microscopy, and reports only absolute CD4 counts with or without CD8 counts;
- Bill 1 unit of one or more of the codes 86355, 86357, 86359, 86367, 88184 and whenever appropriate, 1 or more units of 88185, when the lab performs flow cytometric testing using

## Laboratory Procedure Codes

multiple markers (e.g. lymphoma/leukemia testing). When CD4/CD8 analysis is included, 1 unit of 86360 should be billed in addition, and when CD4 analysis is included (without CD8), bill 1 unit of 86361 in addition. Codes 86360 and 86361 may not be billed for the same date of service. 88184 and 88185 should be used for unlisted markers, including markers used to draw gates, set cursors and monitor variability. Bill 1 unit of the appropriate interpretation code (88187 through 88189) based on the total number of markers performed;

- Bill code 88346 or 88350 when the lab performs microscopic or other non-flow cytometric subset analysis using tagged antibody (ies); bill 1 unit of code 88346 or 88350 per marker.

\* "Abbreviated lymphocyte" and "full lymphocyte" panels are as defined by the New York State Cellular Immunology Proficiency Testing Program.

19. Code **86341 Islet cell antibody** is reimbursable when used to differentiate type I from type II diabetes in patients with equivocal clinical presentation. It is not reimbursable when used as a predictor of disease, e.g., in first-degree relatives of persons with diabetes mellitus.

### Laboratory Procedure Codes

20. Code **87536 HIV-1 quantitation** is reimbursable when used in patient management to predict clinical outcomes, to predict risk of disease progression, and/or to provide information for a decision to initiate antiretroviral drug therapy or to change treatment regimes. This test is allowed as clinically indicated up to a maximum of six per year.

21. HIV genotypic/phenotypic drug resistance testing and phenotypic prediction using genotypic comparison to known databases is a covered service when clinically indicated. Medicaid will reimburse each test (87900, 87901, 87903, 87904, 87906) up to a maximum of three times in a 365-day period across all providers. NYS Medicaid will reimburse for any combination of 87901 and 87903 up to a maximum of four times in a 365-day period across all providers. Code 87903 reimburses \$675.29 for resistance determinations of up to 10 antiviral drugs. Code 87904 should be billed in addition to 87903 to claim reimbursement for additional drug resistance determinations, using one unit **for each (1) additional drug**.

When codes 87901, 87903 and 87906 are billed in combination with the same date of service, the maximum reimbursable fee for any combination of 87901, 87903 and 87906 is \$100 less than the additive maximum fees for the codes.

22. For instrumented screening of PAP smears (codes 88174 and 88175), the following definitions apply:

- For code 88174, "screening by automated system" means primary examination by a slide profiling system without human review and primary examination by human review of all fields of vision selected by a locations-guidance system, with or without quality assurance manual or automated re-screening.
- For code 88175, "screening by automated systems and manual rescreening" means primary examination by human review of all or some fields of vision selected by a location guidance system, and, in addition, full slide review (e.g., AutoScan mode engaged), with or without quality assurance manual or automated rescreening.

23. Effective September 1, 2004, travel expenses associated with in-home phlebotomy services, i.e., blood draws, are reimbursable using code P9604. The recipient must be eligible for in-home phlebotomy as documented by a qualified ordering practitioner and defined below.

**A recipient is eligible for in-home phlebotomy if:**

- The recipient is homebound, which means he or she has a condition due to illness or injury that precludes access to routine medical services outside of his/her residence without special arrangements for transportation, i.e., ambulance, ambulette, and taxi with assistance in areas where public transportation is unavailable; or has a condition that makes leaving the residence medically contraindicated; **and**,
- The recipient is participating in a Medicaid-covered home care program or is currently receiving a Medicaid-covered home care service, i.e., personal care services, certified home health agency (CHHA) services, consumer-directed personal assistance services, or the Long Term Home Health Care Program (LTHHCP).

**Travel expenses are NOT a covered service if they are solely to:**

- Draw blood from patients in a skilled nursing facility;
- Draw blood from a recipient who receives medical services in his or her residence from a professional whose scope of practice authorizes the drawing of blood; or,
- Pick-up and transport a specimen collected by a home health care provider or anyone other than a laboratory representative.

The laboratory is entitled to only one fee for one-way or round-trip travel to a single address, regardless of the number of specimens collected or the number of recipients drawn at that location. There is a limit of 12 claims per recipient per year for in-home phlebotomy service; this allows for 12 round-trips or 12 one-way trips, or any combination of no more than 12 round or one-way trips. The number of specimens collected per trip must be documented.

To calculate the appropriate reimbursement amount for claiming travel to and from in-home phlebotomy services, multiply the number of trips or stops (including the return trip to the laboratory) by the fee and divide this amount by the number of patients seen. The laboratory will pro-rate when the claim is submitted based on the number of patients seen on that trip. The "same address" is defined as a building or complex with the same entrance and egress off of a public road, such as an apartment complex.

**Rules for billing, including pro-rating for multiple recipients:**

1. **One recipient at one site:** A laboratory representative travels from the laboratory to the home of one recipient and returns to the laboratory without making any other stops. The trip out and back is paid as a round-trip. The laboratory should submit a single line claim for **\$18.70** ( $2 \times \$9.35 = \$18.70$ ).
2. **One recipient at each of multiple sites:** A laboratory representative travels in a circuit from the laboratory to the home of each of six recipients and returns to the laboratory. Each segment is paid as a one-way trip at a flat rate of \$9.35. The laboratory is entitled to a total of \$65.45 ( $7 \times \$9.35 = \$65.45$ ) but, since a separate claim must be submitted for each recipient,

\$65.45 must be divided by the number of recipients, which is six. Each of the six recipient claims would be submitted for **\$10.91**.

- 3. Multiple recipients at a single address:** A laboratory representative travels from the laboratory to an apartment complex, draws blood from six recipients and returns to the laboratory. The laboratory is entitled to one round trip fee of \$18.70, but, since a separate claim must be submitted for each recipient, the \$18.70 must be divided by the number of recipients, which is six. Each of the six recipients' claims would be submitted for **\$3.12**.
- 4. Multiple recipients at one address + one recipient at each of several additional sites:** A laboratory representative travels from the laboratory to an apartment complex and draws blood from three recipients; he then continues his circuit to three separate residences, and draws blood from one recipient at each, and returns to the laboratory.

The laboratory should bill as follows:

The laboratory is entitled to \$9.35 for the trip segment from the laboratory to the apartment complex; For each of the three recipients drawn at separate addresses, the laboratory is entitled to \$9.35 trip segment. The laboratory is also entitled to \$9.35 for the return to the laboratory. The total would be four times \$9.35, or \$37.40.

The total number of stops are 5 (one stop from the laboratory to the apartment complex, stops at three recipients' homes and the return trip to the laboratory). The laboratory is entitled to a total of \$46.75 (5 x \$9.35 = \$46.75), but since a separate claim must be submitted for each recipient, \$46.75 must be divided by the number of recipients which is six. Each of the six recipient's claims would be submitted for \$7.79.

24. The Medicaid definition for "date of service" for laboratory providers is the date of specimen collection. For laboratory tests that use a specimen taken from storage, the date of service is the date the specimen was removed from storage.

- 88341 Immunohistochemistry of immunocytochemistry, per specimen; each additional single antibody stain procedure (List separately in addition to code for primary procedure)
- 88342 Immunohistochemistry or immunocytochemistry, per specimen; initial single antibody stain procedure  
(For immunophenotyping, see Rule 18)
- 88344 each multiplex antibody stain procedure
- 88346 Immunofluorescence, per specimen; initial single antibody stain procedure

CODE    DESCRIPTION

- 88350**            each additional single antibody stain procedure (List separately in addition to code for primary procedure.)
- 88360 Morphometric analysis, tumor immunohistochemistry (e.g., Her-2/Neu, estrogen receptor/progesterone receptor), quantitative or semiquantitative, per specimen, each single antibody stain procedure; manual
- 88361            using computer assisted technology (computer generated)  
(Do not report 88360 or 88361 with 88342 unless each procedure is for a different antibody)  
(When semi-thin plastic-embedded sections are performed in conjunction with morphometric analysis, only the morphometric analysis should be reported; if performed as an independent procedure, see codes 88302-88309 for surgical pathology)
